

UNSEEN

A Social Platform for Sharing, Discovery and Connection

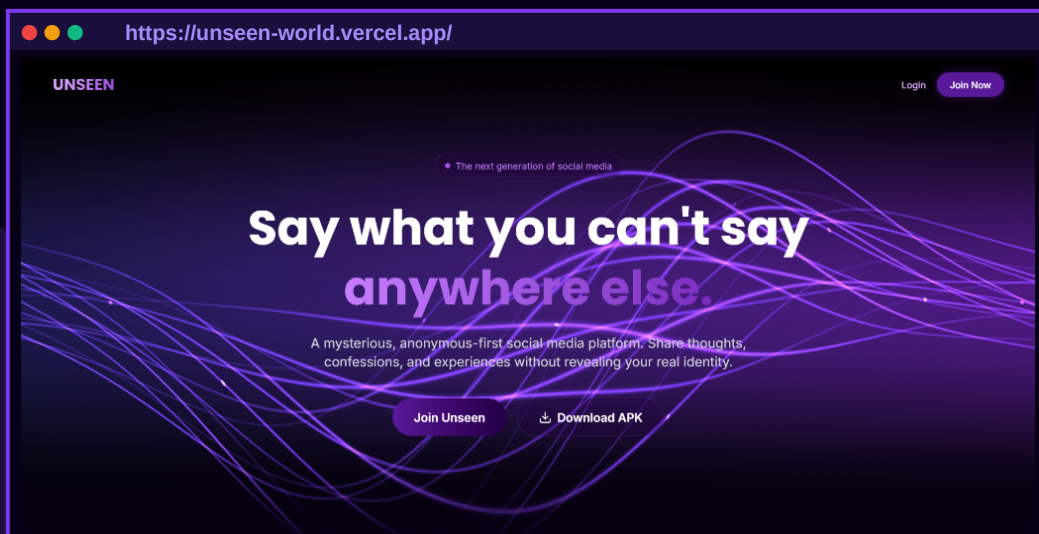

Responsive Web Platform + Android APK

◆ Web Platform

◆ Android APK

◆ Social Platform

Created by Krishnam Gupta

Why UNSEEN?

Product Definition & Vision: UNSEEN is a modern, anonymous-first social ecosystem designed to solve the reputation and curation pressure of mainstream social platforms. In traditional networks, identity-bound profiles and public scoring generate sharing anxiety. UNSEEN dismantles these barriers by enforcing anonymity as a core protocol. The vision is to establish a safe, distraction-free environment for honest sharing, community connection, and mutual discovery.

Vision Concept Flow:

Share

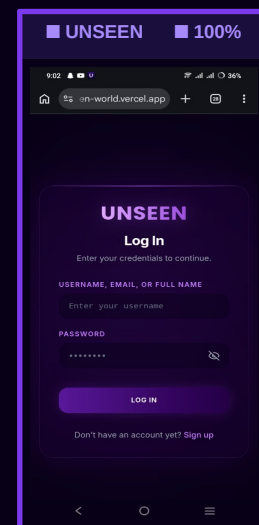

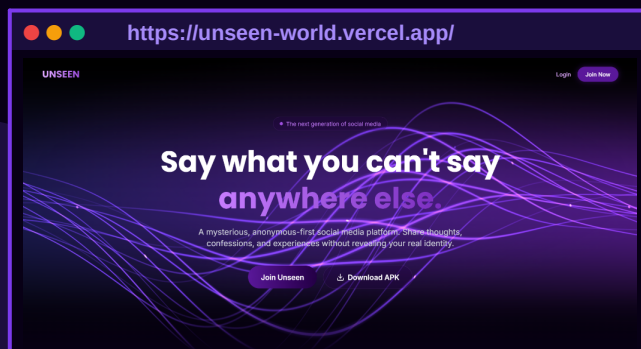

Publish raw thoughts, confessions, and feelings without revealing real identities, reducing curation pressure.

Discover

Explore popular hashtags, search active topics, and view trending global discussions dynamically.

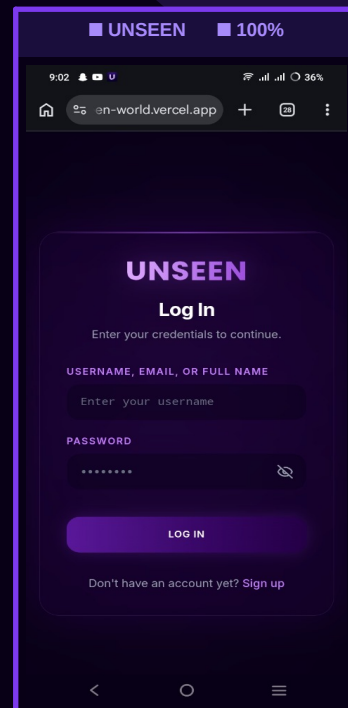

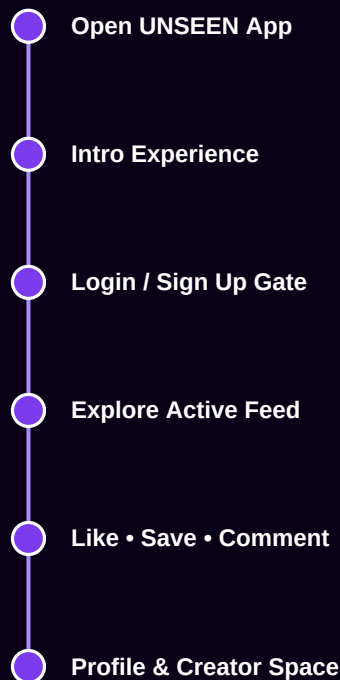

Connect

Follow creator feeds, visit public profiles, and participate in threaded community replies safely.

From Opening the App to Joining Conversations

User Experience Journey & Onboarding PRD: To maximize activation and trust, the onboarding journey enforces immediate, frictionless platform entry. The anonymity engine automatically generates a random persona on signup, pairing adjectives with nouns (e.g. 'silent-shadow-82'). Display names are customizable, and emails are stored securely strictly for optional password recovery. Users navigate from the intro gate directly to global conversations, keeping the barrier to entry extremely low.

■ Frictionless Entry

No real identity checks during registration

■ Intuitive Actions

Simple buttons to like, save, or reply

■ Social Discovery

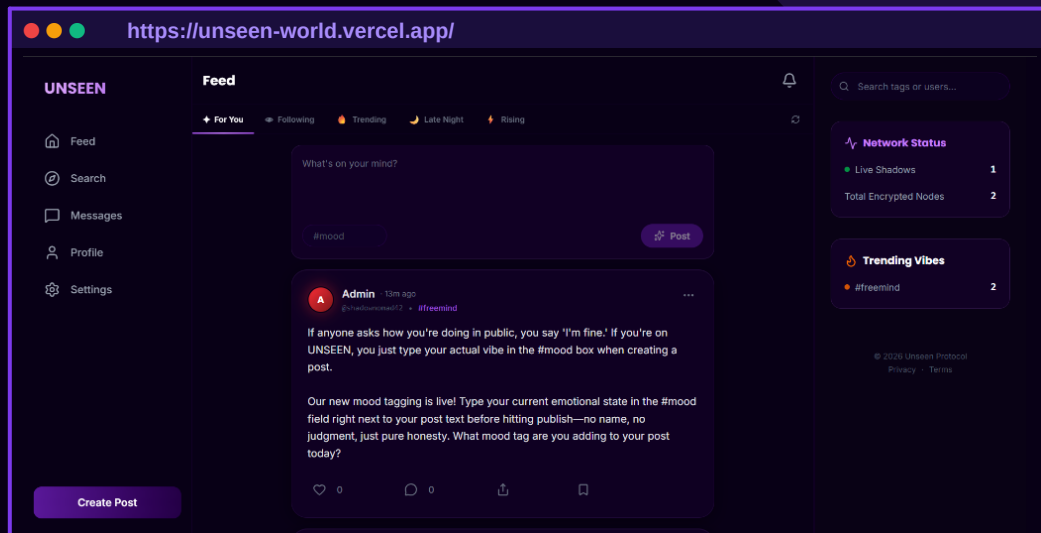

Search users, hashtags, and threads

■ Cross-Device

Seamless mobile browser and APK wrappers

Everything Users Need to Participate

Core Feature Specifications & Requirements: The UNSEEN feed serves as the central hub of community interaction, integrating six core modules to support expression, safety, and interest tracking. Features are engineered to feel responsive and supportive, with content moderation tools enabling self-policing to protect community standards.

■ Create & Delete Posts

Share thoughts or confessions easily. Post authors retain control to delete content.

♥■ Like & Save

Express appreciation and build a curated collection of saved posts inside profiles.

■ Comments & Replies

Participate in threaded discussions with support for nested comments.

■ Follow / Unfollow

Follow specific creators and construct customized feed experiences.

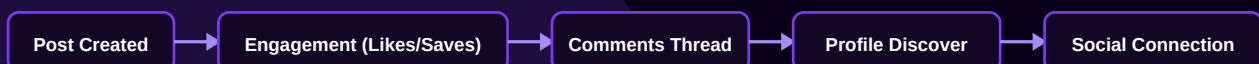

■ Search & Trends

Locate specific content, search active tags, and discover popular hashtags.

■■ Report Tools

Flag inappropriate content, maintaining a high-quality community space.

Dynamic Engagement Pipeline:

One Product, Multiple Ways to Access It

Cross-Platform Access Channels: To maximize community reach, UNSEEN is deployed across responsive web and native-wrapped Android APK channels. Both platforms connect to the same real-time backend API database, ensuring a synchronized, consistent social experience regardless of the user's access method.

■ Responsive Web Experience

- Access instantly from any browser without installation.
- Fluid layouts collapse from desktop columns to slim mobile screens.
- Public pages load efficiently, enabling easy link sharing.
- Flexible UI styling adapts dynamically to client devices.

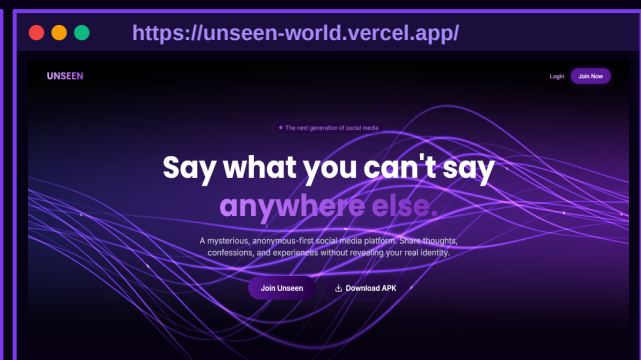

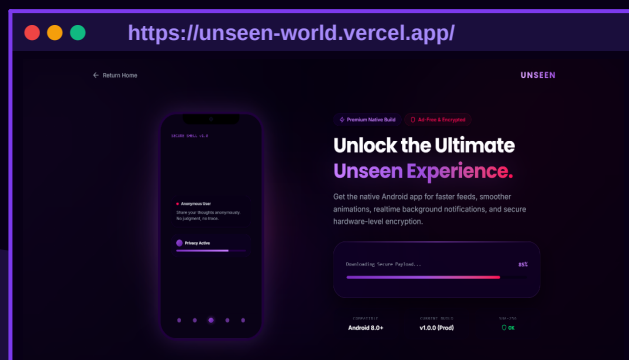

■ Android WebView APK Wrapper

- Installs onto home-screen with native launcher icons.
- Implements WebView controllers to wrap responsive web pages.
- Fullscreen orientation hides address bars for an app-like experience.
- Convenient, quick-tap platform access for mobile devices.

Responsive Website

Shared UNSEEN Experience

Android APK Client

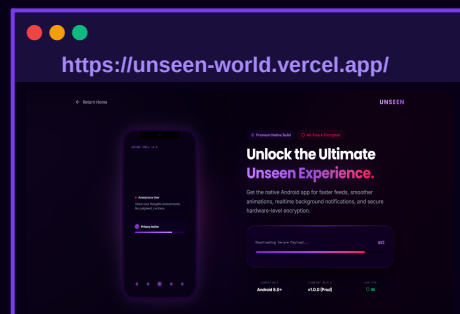

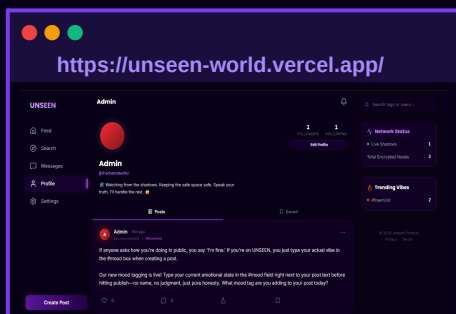

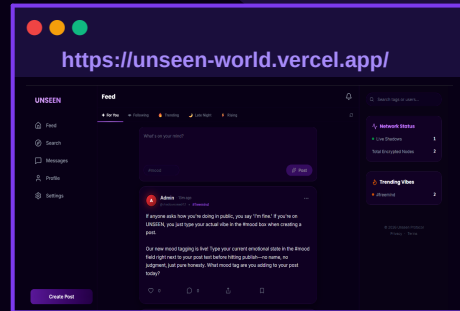

Built for Desktop and Mobile

Design System & UI Responsiveness: The interface is built on a custom design system centered around cyber-dark aesthetics, deep violet borders, and lavender typography highlights. Key layout components resize and collapse dynamically, adapting visual grids and navigation elements to the screen's dimensions.

Desktop Grid Layout

Mobile Browser Viewport

Android WebView APK

Clear Navigation

Familiar bottom bars, sidebar labels, and action tags maintain usability.

Responsive Layouts

Columns compress, overlays collapse, and margins scale for compact screens.

Consistent Visuals

A curated palette of dark violet, indigo accents, and clean text creates a premium theme.

Focused Interaction

Secondary elements collapse on smaller screens, keeping post feeds central.

Keeping Social Activity Connected

Real-Time Event Processing & Socket loops: Anonymity should not feel isolated. To keep the platform alive, UNSEEN integrates real-time WebSocket pipelines. User actions, message transmissions, comment feeds, and profile counts propagate across active clients automatically, providing responsive feedback loops without manual reload stutters.

Like & Save Activity

Fires optimistic state changes, updating interaction counts and flags instantly in UI.

Comments & Replies

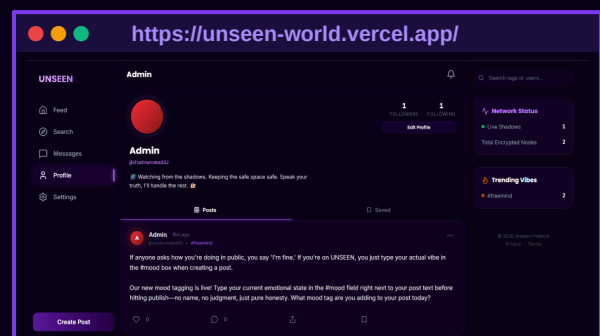

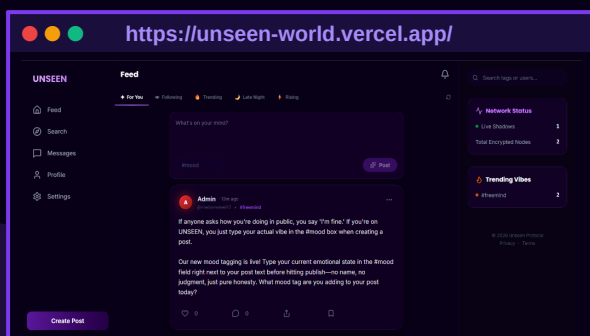

Pushes new text responses directly into open conversation cards in real time.

Follow Updates

Synchronizes follower and following counts on user profiles, resolving discrepancies.

Notification Indicators

Triggers navigation alert badges across active devices, indicating fresh events.

Technology Behind the Experience

Zone 1: Core Technology Stack

Frontend Interface

React.js / Next.js wrapper structures with responsive Tailwind styling.

Backend API Router

Node.js / Express server handlers routing requests securely.

Data Persistence

MongoDB Atlas storing accounts, posts, and messaging logs.

Live Synchronization

Socket.IO WebSockets syncing user counts and notification indicators.

Hosting Targets

Vercel static client CDN, Render container instances.

Android Client WebView

Android Studio WebView layout compilation inside APK bundle wrapper.

Zone 2: Decoupled System Architecture

Zone 3: Safe Credentials & Session Flow

HTTPS/TLS Protection

Encrypts client-server requests, securing all data in transit.

Secure Password Storage

Salt-hashes user password entries via bcrypt before storage.

Authenticated Session

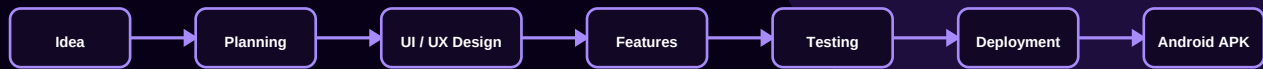

Grants ephemeral, signed JWT access tokens during account sign-in.

Protected API Routes

Validates user tokens via backend interceptors, blocking unauthorized edits.

From Idea to Live Product

Project Build Progression:

■ What I Worked On

- **Product Requirements:** Drafted specifications, scope limits, and feature lists.
- **Feature Planning:** Structured authentication screens, user feeds, and profiles.
- **UI & UX Design:** Configured responsive viewports and dark cyber purple theme accents.
- **Multi-Device Testing:** Validated layout behaviors on desktop browsers & mobile wraps.
- **Issue Iterations:** Identified visual bugs and refined responsive layouts.
- **Deployment:** Configured hosting setups and prepared release APK files.

■ Future Enhancements & Scope:

- **Voice Confessions:** Add audio snippets with dynamic voice filters.
- **AI Moderation:** Classification models to automatically flag abusive logs.
- **Community Spaces:** Group confessions by interest (e.g. mental health, career advice).

DEVELOPMENT ASSISTANCE NOTE

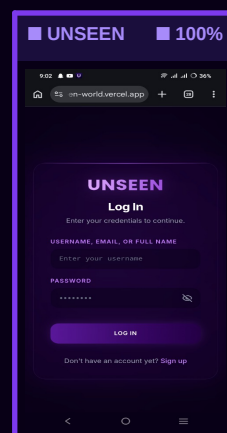

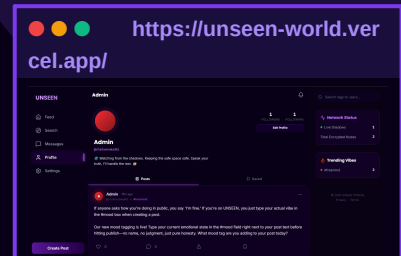

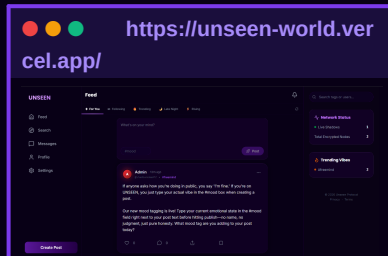

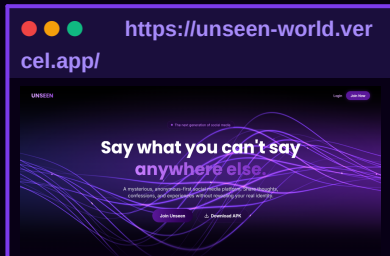

UNSEEN was developed with Antigravity as an AI development assistant. I guided the product direction, feature requirements, testing, UX decisions, issue reporting, iterative improvements, and deployment.
